Task 5 :: Hosting (Module 5)

Hosting the website so that it can be accessed from anywhere

- Host backend on aws with all environment setup
- Make sure to whitelist api ports and host with the database
- Migrate database to mongodb atlas
- Build react app to be hosted on the server
- Set hosted backed url to the frontend
- Test entire frontend and backend

Evaluation Metric:

100% Completion of the above tasks

Learning outcome

- Understand how to host a web api
- How to deploy production ready react applications
- Setting up environment for production

Step-Wise Description

- Choose a web hosting provider
- Select a hosting plan
- Choose a domain name
- Set up your hosting account
- Upload your website files
- Configure your website
- Test your website
- Make your website live
- Maintain your website

Summary of your task

To host a website so that it can be accessed from anywhere, you need to choose a web hosting provider and select a hosting plan. Then, you'll need to choose a domain name and set up your hosting account. You'll also need to upload your website files, configure your website, test it, and make it live by pointing your domain name to your hosting account. Finally, it's important to maintain your website by updating software, monitoring performance, and backing up your website regularly.
